

Final Project: Final - User Guidance

Fall 2021 / IS 2001H / Week Fin / Dec 13
By Dongting Cai (David)

Dear Participant(s),

Thanks for Participate in IS 2001H Final Project by Dongting Cai!

In this project, you will have a conversation with an AI to discuss human and machine learning and evolution that you have learned this semester.

In the dialogue process, you will also interact with AI and think together with AI. Don't worry about the interactive session-about the way of interaction! After the program runs, there will be a guide to guide you on interacting. You only need to follow the instructions of the guide.

Due to the project's needs, this project is written in python and compiled into a computer-executable file.

- **If you use a Windows operating system**, please click on the “.exe” suffix file beginning with “Win.”
- **If you are using macOS or Linux**, please click on the file that starts with “macOS” and has no suffix.

Since the default character size of the machine is small, if you cannot see clearly, you can try to increase the font size.

- **Users of macOS and Linux systems** can press “command/ctrl + plus key (+) or minus key (-)” to adjust the size after opening the file.
- **The adjustment method of Windows is more complicated.** If you need to modify, please refer to Internet resources.

Please note that because I am not very familiar with python file packaging, even though I have tested it many times, there may still be problems when the program

runs. In this case, don't hesitate to get in touch with cai00151@morris.umn.edu, and I will try my best to help solve it.

You can also open the "OR-Code" HTML file attached in the folder and copy all the codes contained in it. Then enter <https://www.online-python.com/> , paste the code, overwrite the existing code, and click "Run." This can also run the program.

Thank you for your cooperation!

Enjoy the conversation! :)

Best Regards,
Dongting
